

MaxOff: how the app works

A plain-language guide to the finished app, as decided up to 1 October 2026: who does what, where every screen is, and exactly what happens after each tap. For Pixora Clips. **This edition is for version 1.2: crew tasks and notifications join stage 1 at app.maxoff.in.**

Prishit

Owner. Decides attendance, leave, money and every final approval.

Prakyat

Admin. Runs his assigned clients and checks the work he gives out. Also an employee.

XYZ

Employee (Crew). Does the tasks given to them, marks the working day, takes leave.

How to read this guide. Screens are written as tap paths, for example **More → Clients → New client**. Each section is tagged **READY NOW** (live in the app at <https://app.maxoff.in>) or **PHASE N** (decided, arriving with that phase). Small details of a screen may change while it is built; the rules in this guide are the decisions.

Live with version 1.2 at <https://app.maxoff.in>: attendance, leave, comp leave, expenses, the month summary, clients and people (stage 1), and now **crew tasks** with freelancers and **notifications**: on the phone, in Alerts and on the bell, with the few emails and quiet hours. Screens from later phases are already in the app and say "coming soon" until they arrive. Next, in this order (crew first; each stage goes live as soon as it is ready): the rest of 5, reminders · 6 My Day, Today, calendar, end-of-day report · 8 handing in work · 7 client projects · 9 money and reports · 10 polish and full launch. A tag like **PHASE 6** means "live once phase 6 is released".

| 11. Turning finished work into earned money | |

1 The app at a glance

MaxOff is Pixora Clips' internal operations system. Clients never log in. It runs on phones and computers, installs like an app, and works in Indian time (IST) everywhere.

Who sees what

Person	Bottom bar on a phone (sidebar on a computer)	Never sees
Prishit (Owner)	Today · Approvals · Tasks · Calendar · More More holds Reports, Clients, People, Settings and Me.	Nothing is hidden from Prishit. He is exempt from marking attendance.
Prakyat (Admin)	Today · Approvals · Tasks · Calendar · More More holds his Clients, People, his Reports, the parts of Settings he may edit, and Me.	Any money or amount, anyone's attendance or leave records, clients assigned to other Admins, other people's work beyond "busy" blocks, other people's expense claims.
Xyz (Crew)	My Day · Tasks · Calendar · Alerts · Me	Clients' records, projects, money, other people's tasks, approvals, reports, settings.

Tasks and **Alerts** are live for everyone, and Prakyat's Approvals holds the tasks he checks. **Calendar** and Prakyat's Reports are in place and say, in plain words, what they will be for and that they are coming soon. On a phone, Prishit and Prakyat have a **bell** at the top of each screen instead of an Alerts tab; it opens the same list and shows how many are unread. Prishit is never given a task himself.

The colour rule. The one solid **red** button on a screen is the one that saves or commits something (Save, Submit, Request leave, the confirming button). A red *outline* means "careful, this removes or cancels something", and it always asks you to confirm with a button that says exactly what it does ("Deactivate Xyz"), never just "OK". Grey buttons go back or open something.

2 Getting in and staying in

Installing the app READY NOW

- 1 Open **https://app.maxoff.in** on the phone: in Chrome on Android, in Safari on iPhone. Sign in.
- 2 Tap **:** → **Install app** (Android) or **Share** → **Add to Home Screen** (iPhone). On iPhone this step is required for notifications.
- 3 MaxOff now opens from its own icon, full screen, like any other app. On iPhone, sign in once more inside the app the first time (the installed app keeps its own sign-in).
- 4 Turn on notifications: tap the slim band above the bottom bar, **"Notifications are off · Turn on"**, then **Turn on** and **Allow** (section 14).

Joining the team READY NOW

- 1 Prishit invites a person: **More** → **People** → **Add person** → **Employee**, with email, name, role (Admin or Crew) and job title → **Send invite**. The invite goes to the person **by email** (from notifications@mail.maxoff.in), and the same link appears with **Copy**: Prishit sends it on WhatsApp together with the one-page "Your first day with MaxOff". A **Freelancer** is added from the same button, with no invite (section 13).
- 2 Xyz opens the link on the phone, taps **Continue to MaxOff** (only that tap uses the link up, so a chat preview cannot), sets a password and lands on a welcome screen on **Me**. The link works **once**, within 24 hours, whichever is opened first, the email or the copied link; if it has expired or was used, Prishit taps **People** → **Xyz** → **...** → **Copy invite link** for a fresh one.
- 3 Attendance starts the **next day**: the joining day is never counted.

Staying signed in READY NOW

- Once signed in, **people stay signed in**, like WhatsApp or Gmail. The app never signs anyone out on its own, so tasks and notifications reach them in the evening and on days off too.
- Opening the app is **not** attendance. Attendance is the separate **Start day** and **End day** (section 3).
- **Me** → **Sign out of this device** is only for a lost or shared phone. It warns that notifications stop on that device.
- When Prishit deactivates someone (**People** → **person** → **...** → **Deactivate**), they lose access on every device at once. Their history is kept.
- Forgot password: **Sign-in screen** → **Forgot your password?** emails a link (from **noreply@mail.maxoff.in**, "Set your MaxOff password"): **Continue to MaxOff**, then a new password.

The Me page READY NOW

Shows your name, phone, sign-in email, role and job title as plain text. To change them: **Me** → **Edit** → change a field → **Save** (red) → a confirmation names the change ("Your name will change from X to Y") → confirm → "Saved". Leaving with unsaved changes asks "Discard changes?". Me also holds **Attendance & leave**, your photo, **Appearance** (light, dark or follow the phone), **Notifications** for this device with **Send a test notification** (section 14) and, for a coordinator, **Your freelancers** (section 13).

3 Xyz's working day READY NOW

Working hours are flexible. MaxOff records when the day really starts and ends, and never guesses.

Morning: Start day

On a working day Xyz opens the app anywhere, any time. Until the day is started, this appears inside the app:

```
Started working?  
Start your day to record it.  
  
[      Start day      ] (red)  
On leave today? Choose leave  
Just looking
```

- **Start day** → the start time is recorded **at that tap**. The day shows "Present · waiting for approval" until Prishit approves it.
- **On leave today?** → choose **Leave** or **Half day**, add an optional reason, submit. It goes to Prishit.
- **Just looking** → the prompt closes (for example Xyz only wanted to check tasks). It returns when the app is opened or returned to, at most every 30 minutes, until the day is started or leave chosen. My Day also shows a strip: "Not started · Start day".

During the day: My Day PHASE 6

```
• Started 9:12 am · waiting for approval [End day]  
Needs your "Task Noted"      2  
Changes requested            1  
Overdue                      1  
Today                        3  
Upcoming · Events  
[ + Suggest a task ]  
End day
```

Everything is one tap away: tapping a line opens those tasks; tapping the status line opens

Attendance & leave. **For now** My Day is the status line with Start day and End day, and below it "More of your day is coming soon"; the tasks themselves are on the **Tasks** tab (section 9).

Evening: End day

- 1 Tap **My Day → End day**.
- 2 Optional: **Worked late? Add an overtime note** (roughly how long, and what was worked on).
- 3 "Any expenses to claim today?" → **No** (the default), or **Yes**: the button becomes **End day, add expenses** and the claim form opens right after (section 17).
- 4 Confirm. The end time is recorded. **End day is final** for that day: it cannot be reopened. The app stays fully usable afterwards (checking tomorrow's tasks at 9 PM is fine and is not work).

If something is missed

Situation	What MaxOff does
Started but not ended by 8:30 PM	A notification: "You haven't ended your day. If you're done, end it; if you're working late, carry on." Prishit sets the time in Settings → Thresholds .
Never ended the day	After midnight the day is marked "End of day not recorded". No time is ever invented. Until 5:00 AM (and only before starting the new day) the strip still offers "Yesterday not ended · End day", and the end lands on the right day. After that the day stays "End of day not recorded"; late work goes in an overtime note. Prishit sets the 5:00 AM in Settings → Thresholds .
Never started, no leave, on a working day	At 11:59 PM the day is proposed as Absent . It is only official once Prishit approves or corrects it.
Worked after ending the day	Add an overtime note (section 5).

Days off (Sundays and holidays)

No prompt and no absence check. If Xyz actually worked, they tap [My Day → I worked today](#) and describe the work. Prishit then decides (section 5).

Approved leave days

No prompt. The strip says "On leave today" with **I'm working today**, which asks to confirm. If Xyz confirms and Prishit approves, the day counts as "1 day worked" and the leave itself stays as it was. On an approved **half day** the strip says "Half day today" and **Start day** and **End day** stay available: the half day stands.

Prakyat (Admin) does exactly the same as Xyz; his Start day and End day live on his Today screen. Prishit never marks attendance.

4 Leave [READY NOW](#)

Asking for leave (Xyz or Prakyat)

- 1 [My Day → status line](#) or [Me → Attendance & leave](#) → [Request leave](#).
- 2 Choose **Leave** (one day or a range), **Half day** (one date) or **Comp leave** (only shown when a comp credit is available, section 5). Dates can be today or later, up to a year long. The reason is optional.
- 3 Tap [Request leave](#) (red). It appears as "Waiting" and in Prishit's Approvals.
 - **Withdraw** a request while it's still waiting: tap it → Withdraw → confirm.
 - **Change or cancel** approved leave: tap it → Change / Ask to cancel. This sends a new request to Prishit; the original stays approved until he decides. Possible only until the leave has ended; after that, only Prishit can correct it.
 - Overlapping requests are refused ("request a change instead").
 - The **Attendance** tab shows each day of the month with its full story in plain words ("You chose Present", "Prishit changed it to Absent: ..." with his reason).

Only Prishit decides leave. Prakyat has no say in anyone's attendance or leave, including his own.

5 Extra work and comp leave READY NOW

Recording extra work (Xyz)

- **Overtime note:** Attendance & leave → Extra work → Add note (or at End day). Pick the day (up to 7 days back), roughly how long (optional) and what was worked on (required).
- **Worked on a day off:** My Day → I worked today on a Sunday or holiday (or later, up to 7 days back), with a note about the work.

Prishit reviews it

Approvals → Extra work → Review → Decide... . For each note: **Grant 1 day, Grant ½ day or No comp leave.** For day-off work he also decides whether to **mark the day as worked.** Nothing is automatic: if the extra work came from Xyz's own mistake, for example, Prishit simply grants nothing. Xyz sees the outcome on the note: "1 comp leave granted · use by 31 Oct" or "Reviewed by the Owner".

Prishit can also grant comp leave **at any time, for any reason**, without a note:

People → Xyz → Leave → Grant comp leave (½ or 1 day, optional note Xyz sees). A double tap grants it once. He can take back an unused grant with **Revoke**, with a reason Xyz reads.

Using comp leave (Xyz)

- 1 Xyz sees the balance on Attendance & leave → Extra work : "1½ days of comp leave · use by 31 Oct".
- 2 Request leave → Comp leave (1 day) or Comp leave, half day (½) → pick the date from the list. The list holds only **working days** (no Sundays, no holidays) **up to the end of the month** the credit was granted in.
- 3 It goes to Prishit like any leave. **He can refuse it** (for example, there's a shoot that day). While it waits, the credit is held; if refused, withdrawn or cancelled, the credit comes back (unless its month has ended).

Credits expire at the end of the calendar month they were granted in, even if that's two days later. Expired credits stay visible in the history. If Prishit later adds a **holiday** on a date that already has comp leave (waiting or approved), that comp leave is cancelled and the credit goes back to Xyz, with a note saying which holiday.

6 Prishit's attendance tools

Today READY NOW (full screen in phase 6)

Today's attendance >
11 Present · 2 On leave · 1 Waiting · 1 Not started
Xyz • Waiting for decision >
Abc • Not started yet >
... • Present >

The card opens Approvals. Under it is the board: everyone expected today, each once, in the order Prishit acts on them (waiting for his decision, not started, present, on leave, absent). Tapping a person opens their page. Below, "More of your day is coming soon": the short "Needs you" list, tasks and client work join in phase 6.

Approving attendance and leave READY NOW

Approvals is one screen, grouped: **Attendance** · **Leave** · **Extra work** · **Expenses** · **Crew tasks** (Client items join in phase 7). The badge on the tab shows how many things wait. Crew tasks are covered in section 9; Prakyat's Approvals holds only his **Tasks to check**. Extra work and Expenses are review-only: every one is opened and decided on its own.

- **Approve** one row → it fades, with a 6-second **Undo**. Nothing is saved until the Undo time passes (or the app is left).
- **Approve all N** on a group → a confirmation with the count → "Approve N" (red). Only the rows on screen are approved.
- **Review** → a sheet with the details → **Correct** the day (choose the right status and write a reason) or **Reject** leave (with a reason). The form says "Xyz will see this reason".
- Correcting a leave day to Present counts it as "1 day worked"; the approved leave stays, and a note says so.
- Approving leave that covers days Prishit has already decided leaves those days as he decided, and says so ("These days keep your earlier decision").

A person's page READY NOW

Today → tap a person or **More** → **People** → tap a person . Tabs: **Profile** (details, Edit, and ... for Deactivate, Reactivate, Copy invite link), **Leave** (their requests, with Edit and Cancel on approved leave), **Attendance** (month by month, with Correct on every day). The < at the top goes back.

The month summary READY NOW

People → person → **Month** , and the team report at **More** → **Reports** → **Month** , live at any time (section 16).

7 Clients READY NOW

Adding a client (Prishit)

- 1 **More → Clients → New client** : name (required, unique), and anything else known: business name, address, GSTIN, phone, email, website, requirements.
- 2 The client opens in **Draft**. Add **contacts** (one is marked primary), the **Brand** kit (logo, colours, fonts, tone of voice, notes), the **Google Drive** folder link and any **custom fields**.
- 3 **... → Assign Admin → Prakyat** . Prakyat is notified: "You now run Sharma Weddings".
- 4 **... → Activate** . The client is live.

The client page

Tabs: **Overview** (details, contacts, custom fields) · **Brand** · **Activity** (everything that changed); **Projects** joins in phase 7. The crew tasks labelled with a client are found under **Tasks → All tasks** , filtered by client. Prishit also sees his private notes and, later, money panels.

- **Pause**: everything stays visible and editable, but monthly work stops creating new rounds. **Close (Inactive)**: stays searchable, no new work until Prishit reactivates it. Only Prishit changes the state.
- Prakyat sees and edits only the clients assigned to him. Xyz never sees a client's page, only the client's name and brand basics on a task.
- The client list: cards with logo, name, state and Admin; search and filters; opens on Active clients.
- **Brand colours are swatches**: each colour shows as a chip with its name and hex code, and a tap copies the code ("Copied #E11D48"). Fonts are a simple list, each with an optional note on where it's used. In **Brand → Edit** each colour is a row with a colour picker, a name and the hex code; rows can be added, moved up or down and removed, and Save names every change.
- **Closing a client** asks for an optional reason. Only Prishit ever sees it, on the client's Activity.
- **No client is ever left without an Admin**. If Prishit makes Prakyat Crew, or deactivates him, the same confirmation first asks "Move Prakyat's 3 clients to: [Admin]" (one Admin for all, or **Choose per client**), then makes the change.

8 Client projects and the monthly round PHASE 7

Every client's work is organised as **projects**, and each project is made of **pieces of work** (items), for example "Reel 1 – Ambience".

```
Sharma Weddings
├─ Monthly Production      every month · Retainer
│   └─ October: Reel 1 – Ambience · Reel 2 – Menu · ... · Post 1 · Post 2
├─ Drone Documentation    every week · Retainer
│   └─ Week 1 · Week 2 · ...
└─ Brand Film             one-time · Additional Work
    └─ Make the video
```

Creating a project (Prakyat or Prishit)

- 1 Clients → Sharma Weddings → Projects → New project (or start from a saved template).
- 2 Name it, choose how it repeats (**monthly**, **weekly** or **one-time**), optionally pick the **steps** every piece goes through (for example Script → Shoot → Edit → Posted), and list the pieces.
- 3 **Prishit only** sets the money: an amount per month (split across the pieces, or a value per piece) or a fixed amount for a one-time project, and the category (Retainer, Project or Additional Work). Prakyat never sees any of it.

The monthly round

- On the **1st** (or every **Monday** for weekly work), MaxOff creates the new round for every active client, copying the list of pieces. Prakyat renames them for the month's themes.
- The project page shows the round (switch between months), each piece with its steps, and progress like "**9/12 done · 8/12 approved**".
- Prakyat ticks steps as the work happens and marks a piece **done** when it's delivered. Several pieces can be ticked at once.

Planned: a place on Prakyat's and Prishit's **Today** that shows every client's pieces due this week and overdue, so daily work isn't four screens deep. Settled at the start of phase 7.

9 Crew tasks, from creation to final approval

READY NOW

Tasks are how work is given to people. They are separate from client projects: Xyz sees tasks, never projects. Everyone has a **Tasks** tab, and its badge counts the tasks you haven't noted yet and the ones sent back to you for changes.

Creating a task (Prakyat or Prishit)

- 1 **Tasks → New task**. **Start from** fills it from a saved template (type, priority, stages and field defaults); the people, the deadline and the client are always picked by hand.
- 2 Fill in: **Title**, **Type** (Normal, Shoot / Site Visit, Meeting, Posting, Review / Approval, Other, Custom; Prishit edits the list), **Priority** (Low, Medium, High, Urgent), **Assign to** (add the people, then pick the **primary owner**: the one who marks it done), **Deadline** (date and time), an optional **Client label** (Sharma Weddings), a description (links to a brief go here) and optional **stages** to tick off.
- 3 MaxOff warns under a person's name, and never blocks: "4 tasks already due on 3 Oct", "Busy 10:00 AM–12:00 PM on 3 Oct", "On leave on 3 Oct". Keeping the person anyway is recorded.
- 4 **Create task** (red). It appears in Xyz's Tasks at once, and Xyz is notified (section 14).

Shoots, site visits, meetings and postings also ask for an event date, optional start and end times, a place and a purpose. They will show on the **Calendar** when it arrives (phase 6).

Xyz's Tasks tab: My tasks

My tasks [Suggest a task]

Not noted • 2

Changes requested • 1

Overdue • 1

Due today • 3

Upcoming • 4

2 tasks with the reviewers >

All my tasks >

Your suggestions >

Always in this order: what you haven't noted, what came back for changes, what is late, what is due today, then what is coming. Each task sits in one group only. A row shows the title, the deadline, the client's name, its state (To do, In progress, Changes requested...) and an **Overdue**, **High** or **Urgent** mark. Tasks you have handed in wait under "with the reviewers"; **All my tasks** also holds the finished ones.

The task page

< Tasks Edit Reel 1 – Ambience ...

• To do • Medium • Due today 6:00 PM • in 3 h

Tap Task Noted to say you've seen it.

[Work] [Chat • 2 new] [Activity] [Details]

Brief the description, the shoot or meeting

Stages ☐ Rough cut ☐ Colour ☐ Export

[Task Noted] (red)

The top says where the task stands, how far the deadline is (red once it has passed: "overdue by 3 h") and **what is needed from you**. Below it is **one button only, your next step**; on a phone it stays at the bottom of the screen. Everything occasional is under .

View	What it holds
Work	The brief, the stages to tick, and the hand-in (the note and its link) once the task is marked done. A task always opens here.
Chat	Questions and updates; everyone on the task sees them, and links can be tapped. On a phone it opens as a full-height sheet. The tab reads " Chat · 2 new " when there are comments you haven't read, and opening Chat marks them read. Chat stays open in every state, even when the task is locked.
Activity	Every change as a sentence, with who and when: the newest five, then Show all .
Details	The people, each marked Noted or Not noted , the primary owner, the client, the type, the approval route and who created it. On a computer it is the panel on the right.

Unread chat markers. In every task list (My tasks, Open tasks, All tasks, Approvals) a task with comments you haven't read shows a small speech bubble with the count. Your own comments never count.

XYZ receives it and does the work

- 1 The task is at the top of , under **Not noted**. XYZ opens it and taps  (red), which records that it was seen, and when. **Every person on the task** does this.
 - 2 The button becomes : tap it when the work begins, and the task reads "In progress". It is optional:  →  works without it.
 - 3 While working, XYZ ticks the stages and writes in Chat.
 - 4 When it's finished, **only the primary owner** taps . A sheet opens with an optional **note**: **paste the Google Drive link to the work there** (a file or a folder shared with whoever checks it). There is no file upload yet (section 10), so the link in the note is the hand-in. If the deadline has passed, "Why is it late?" must be answered. Then  (red).
 - 5 The task goes for review and is **locked** for the people on it ("Locked while it's with the reviewers. Chat stays open.") until it is approved or sent back.
- **If nobody notes it:** the task shows under **Needs you** on Praktyat's Tasks after 4 hours and on Prishit's after 8 hours ("*XYZ hasn't noted it · 9 h*"). Prishit sets both in . Automatic reminders to XYZ arrive with the next part of phase 5.
 - A task is **overdue** the moment its deadline passes without final approval: it moves to **Overdue** in My tasks and to **Needs you** for Praktyat and Prishit.

Checking and approving

Who created the task	Who checks it after Mark done
Prishit, with "Checked first by: Nobody"	Prishit
Prishit, with "Checked first by: Prakyat" (picking a client label suggests that client's Admin)	Prakyat, then Prishit
Prakyat	Prakyat, then Prishit
The checking Admin is on the task himself, or coordinates a freelancer on it	His check is skipped (recorded); straight to Prishit

- 1 Prakyat checks:** Approvals → Tasks to check . **Approve** sends it on to Prishit, with a 6-second **Undo**. **Review** opens the hand-in (when it was handed in, the deadline, why it was late, the note with its link) with **Open the task** and **Request changes...**, which needs a reason. The same two buttons are on the task page: **Approve** and **Request changes** (red outline).
 - 2 Changes requested:** the task goes back to Xyz, under **Changes requested** in My tasks, with the reason at the top of the task ("Prakyat asked for changes"). Xyz fixes it and taps **Mark done again**, with the new link. Every hand-in is kept as a version (Version 2, and the earlier ones below it).
 - 3 Prishit gives the final approval:** Approvals → Crew tasks → **Approve** (or **Approve all N**, which asks to confirm with the count), or **Approve** on the task page: "This is the final approval: the task is complete." Only now is the task complete. He can also request changes, exactly as Prakyat does.
- If Prakyat's check is taking too long, Prishit opens the task → ... → **Decide it yourself**: the check is removed, recorded in the history, and the task comes straight to him.
 - ... on the task, for its creator, its checking Admin or Prishit: **Edit task**, **Cancel task** (with a reason everyone on it sees) and, on a finished task, **Reopen task** (with a reason; it goes through the same checks again). Only Prishit has **Change approver**.

Prishit's and Prakyat's Tasks tab

Needs you comes first: their own tasks to note or fix, late work on the tasks they run, anyone who hasn't noted a task in time, "3 tasks waiting for your approval" (opens Approvals) and "2 suggested tasks to decide". Then **Open tasks** by deadline. **All tasks, with filters** is one tap deeper: by state, overdue, person, client, type, and employees or freelancers.

Suggesting a task (Xyz or Prakyat)

- 1** Tasks → **Suggest a task**: what needs doing, optional details (why it matters, a link to a brief) and an optional client → **Send suggestion** (red).
- 2** It waits under **Tasks → Your suggestions**, where it can be **withdrawn** until someone decides.
- 3** Prishit or Prakyat opens **Tasks → Suggested tasks** and taps **Make it a task** (the New task form opens, filled from the suggestion) or **Decline...** with a reason the suggester reads. Prakyat's own suggestions are decided by Prishit.

- 4 Xyz sees what became of it: "Made a task", with **Open the task** when Xyz is on it, or "Declined" with the reason.

10 Handing in work (files and links) PHASE 8

Until phase 8 nothing is uploaded: the hand-in is the note on **Mark done**, with a Google Drive link pasted into it (section 9). This is what arrives then:

- 1 On the task: **Hand in work**.
- 2 **Photos and documents** (up to 25 MB) and **short videos** (up to 100 MB) upload straight from the phone or computer. Photos are kept exactly as taken, full quality, including iPhone formats; MaxOff makes a small preview so they open anywhere.
- 3 **Large videos:** paste a **Google Drive link** to the file. If a file is too big to upload, MaxOff says so and asks for a link.
- 4 Each hand-in is a **version** (v1, v2 ...). Prakyat and Prishit preview it, download the original, comment, and approve or ask for changes on that exact version.

For the first version, a pasted Drive link points to Xyz's **own** file: if they delete or unshare it, it's gone. The automatic company copy in Pixora's Google Drive comes after the launch (section 21).

11 Turning finished work into earned money PHASES 7 AND 9

A task being approved does **not** tick the client's piece of work by itself. The two are confirmed separately, on purpose:

- 1 Xyz's task "Edit Reel 1" is approved (section 9).
- 2 Prakyat opens **Clients → Sharma Weddings → Projects → Monthly Production**, ticks the steps (Edit ✓, Posted ✓) and marks **Reel 1 done**.
- 3 Prishit sees it in **Approvals → Client items** and taps **Approve** (one or several), or sends it back to Prakyat with a reason.
- 4 **Only after Prishit's approval** does Reel 1's value count as **earned**. Until then it is only "planned".

Prishit's money view (**Reports**, and panels on each client) shows for each client, category and month: **Potential** (planned), **Achieved** (approved) and **Remaining**. He can adjust a figure with a note; the original calculation is always kept beside it.

12 Additional work PHASE 7

The client asks for something outside the monthly package, for example one extra reel:

- 1 **Clients → Sharma Weddings → Projects → New project** : "Extra Reel – Engagement", **one-time**.
- 2 Prishit sets its category to **Additional Work** and gives it a price.
- 3 From here it follows the same path: a task for Xyz, hand-in, Prakyat's check, Prishit's approval, Prakyat marks the piece done, Prishit approves it, and it counts as earned.

Keeping it as its own project means the monthly package's numbers stay clean, and Additional Work shows separately in the reports.

13 Freelancers READY NOW

- Freelancers **don't get a login**. Prishit adds one with **People → Add person → Freelancer** : name, job title, optional phone, and a **coordinator** (an employee, Admin or Crew, for example Xyz; never Prishit) → **Add freelancer**. One person can coordinate several freelancers.
- Tasks can be given to the freelancer (say, Asha) like anyone else; in every list she reads "Asha (freelancer)". Xyz, as coordinator, does everything for her **from Xyz's own account**: the task is in Xyz's My tasks marked "For Asha", and the buttons read **Noted for Asha, Start work for Asha, Mark done for Asha**. In Chat, Xyz chooses "Writing as: Yourself" or "For Asha". The record always names both: "Noted by Xyz for Asha".
- Notifications meant for the freelancer go to Xyz, marked "for Asha" (section 14). Xyz's own freelancers are listed on **Me → Your freelancers**.
- If Prakyat checks a task and also coordinates a freelancer on it, his check is skipped, as if he were on the task himself (section 9).

- On the freelancer's page Prishit can **Change coordinator** (the history is kept) or **Invite as employee**: the same record gets a login, and attendance starts the day after joining. Deactivating a coordinator first asks who takes over their freelancers.
- No attendance, leave or expense claims for freelancers, and they are left out of the month summary.
Tasks → All tasks can be filtered to employees or freelancers; separate figures in the reports come in phases 6 and 9. Payments to freelancers are not in the first version.

14 Notifications

MaxOff tells the people concerned the moment something happens, as a **notification on the phone** (or the computer), also when the app is closed. Notifications are **mandatory**: nothing in the app turns them off.

Turning them on READY NOW

- 1 **Install the app first** (section 2). **On iPhone this is required**: an iPhone notifies only the installed app, so in Safari tap Share → Add to Home Screen, then open MaxOff from its icon. Until then the band reads **"Install MaxOff to get notifications · How"**, and tapping it shows these steps.
 - 2 While none of your devices has notifications on, a slim band sits just **above the bottom bar** on every screen: **"Notifications are off · Turn on"**. Tap it.
 - 3 A sheet opens, "Turn on notifications", with a line on what they are for. Tap Turn on (red); the phone then asks for permission: tap **Allow**. "Notifications are on for this device" appears, and the band is gone on all your devices.
 - 4 Check it: Me → Send a test notification → Send test. "MaxOff notifications are on" should arrive within seconds, quiet hours or not.
- The band has no close button: it stays, for everyone including Prishit, until one of your devices works.
 - **Tapped "Don't allow"?** Tap the band: the sheet reads "Notifications are blocked on this device": allow notifications for MaxOff in the browser's site settings (or the app's info screen), then come back.
 - **A second device**, for example the laptop: Me → Notifications → Turn on here.
 - Me → Sign out of this device stops notifications on that device only. Closing the app does not.

What arrives READY NOW

- The **full text** shows on the lock screen, for example *"New task: Edit Reel 1 – Ambience", "Assigned by Prakyat · due 3 Oct, 18:00"*. **Amounts never appear in a notification**, not even Prishit's.
- **Tapping it opens the right screen** (the task, your leave, Approvals), with its list underneath, so back goes to the list and not out of the app.
- Nobody is notified about their own action, and nobody outside the matter is told.
- A freelancer's notifications go to their coordinator, marked "· for Asha".

What happens	Who is told
A new task, or someone is added to one	Each person on it (also by email)
A task is edited · someone is taken off it	The people who stay on it · that person
Mark done	The checking Admin, or Prishit when no Admin checks
Prakyat approves his check	Prishit
Changes requested	The people on the task, with the reason
Final approval · cancelled · reopened	The people on the task and whoever created it
A comment in Chat	Everyone on the task, its creator, its checking Admin and anyone who commented before; never the writer
A task is suggested	Prishit and that client's Admin (with no client: Prishit and every Admin)
A suggestion becomes a task, or is declined	Whoever suggested it
Leave is requested, or a change or cancellation asked · an overtime or day-off note · an expense claim	Prishit
A day approved or corrected · leave decided · extra work reviewed · comp leave granted or revoked · a claim approved, rejected or paid	The person it is about
The day was started and not ended by 8:30 PM	That person: "You haven't ended your day"
People proposed absent at 11:59 PM	Prishit, one notification with the names (it reaches him at 7:00 AM)
A client is given to an Admin	The new Admin ("You now run Sharma Weddings") and the previous one
A freelancer gets a coordinator, or a new one	The new coordinator and the previous one

Task Noted notifies nobody: it shows on the task (Details) and in the lists.

The bell and Alerts

READY NOW

Alerts

3 unread

[Mark all read]

- New task: Edit Reel 1 – Ambience 4:05 pm
Assigned by Prakyat · due 3 Oct, 18:00
- Changes requested: Menu reel Yesterday, 6:10 pm
The logo is cut off at the end.
Leave approved 28 Sep, 11:02 am
3 Oct – 4 Oct

- Every notification is also kept in the app: **Alerts** in Xyz's bottom bar; the **bell** at the top of each screen for Prishit and Prakyat, and in the top bar on a computer. The number on it is how many you haven't read.

- The list is newest first, 20 to a page. An unread one has a dot and a bold title.
- **Tap one:** it is marked read and opens what it is about, with its list underneath. One with nothing to open is simply marked read. Opening a task, a client or a person also marks its notifications read.
- **Mark all read** clears the count ("All read"). Nothing is ever deleted: older ones are on the next pages.
- The bell and the list update while you watch, with no reload. The 7:00 AM summary opens Alerts.

Quiet hours: 22:00 to 07:00 READY NOW

- Between 10:00 PM and 7:00 AM **no phone notification is sent**, whatever it is about. There is no "urgent" exception; only the test from Me goes through.
- **At 7:00 AM each person gets one notification.** If one thing happened overnight, it arrives as itself. If several did, it is a summary: *"3 updates while you were away. Open MaxOff to see what happened."*
- Emails are not held back at night.
- The hours are the same for everyone for now; a setting for Prishit comes later.

What also comes by email READY NOW

- **Always:** a new task ("New task: ..."), to each person given it.
- **Only if none of your devices has notifications on:** changes requested on your task, and Prishit's decisions about you (attendance, leave, extra work, comp leave granted or revoked, expense claims).
- **Never:** comments, task edits and everything else. Those are notifications only.
- The email comes from **MaxOff** <notifications@mail.maxoff.in> with the same words and one button, **Open in MaxOff**. At most 20 a day per person (Prishit sets it in **Settings → Thresholds**) and 90 a day for the whole company; past that the email is skipped and the notification still arrives.
- The invite (from the same address) and password emails are separate and always sent.

Still to come PHASE 5, NEXT PART

- **Task reminders:** 2 days before, 1 day before, at the deadline and when overdue; "tomorrow" for a shoot or meeting.
- **Task Noted reminders** every 2 hours, then Prakyat after 4 hours and Prishit after 8 hours; and the alert when nothing was handed in 24 hours after the deadline. Until then these show under **Needs you** on Tasks (section 9).
- Prishit's **morning digest** email, and his view of **who isn't reachable** (notifications blocked, iPhone app not installed, repeated failures), so no one misses a shoot silently.

15 Where to look during the month

Prishit wants to know...	Where
Who's in today	Today READY NOW
Which tasks need him, what's late, who hasn't noted a task	Tasks → Needs you READY NOW
Everything waiting for his decision	Approvals (the tab badge shows the count)
Shoots, meetings, leave, planned client pieces	Calendar (day, week, month; filter by client, person, type) PHASE 6
A summary of the day	The automatic end-of-day report each evening: attendance, tasks finished and overdue (with reasons), approvals, overtime, tomorrow's events PHASE 6
Money, workload, delays, trends	More → Reports , by week, month or any range PHASE 9
One person's month	People → person → Month READY NOW

Prakyat's Today [PHASE 6](#) shows his clients' progress, client work pending, tasks needing attention, his approvals, the calendar and issues; for now it is his Start day and End day, and his tasks are under [Tasks → Needs you](#). His **report** answers one question, "is the work getting done?", with six numbers (on time, round progress, rework, his own turnaround, overdue now, how long people take to tap Task Noted) and two lists (who is loaded this week, where pieces wait longest). Never money, attendance or leave.

Xyz's My Day and **My tasks** show only Xyz's own work.

16 End of the month

Unfinished client work PHASE 7

MaxOff highlights every piece not finished in the month's round. For each one Prishit chooses:

- **Carry forward:** it moves into next month but keeps its original month and value, so next month's package isn't inflated.
- **Close** (with a reason): kept, never deleted; its value stays visible as "not achieved".
- **Leave pending.**

Billing and closing the month PHASE 9

- Prishit marks each client's month **Billed** (optional date and note). MaxOff doesn't send invoices.
- **Reports → Close month** saves a **permanent record** of the month. Later mistakes are fixed as dated corrections, never by overwriting.

Salaries: the month summary READY NOW

For each person (**People → person → Month** , with < > for other months) and as a team report (**More → Reports → Month** : one row per Admin and Crew member, "Worked 21½ of 26 · additional leave 3½", days still waiting for review, and "₹1,840 to pay · 5 claims"; a row opens that person's month), live at any time. Only days Prishit has decided are counted; days still waiting are shown on top.

Line	Example: Xyz, October
Working days in the month (no Sundays or holidays)	26
Days worked (present days + ½ per half day)	21.5
Leave · Half days · Absent	2 · 1 (counts ½) · 1
Comp leave used (never counted against Xyz)	1
Additional leave (the figure that can reduce pay)	2 + ½ + 1 = 3.5 days
Days off worked (shown on its own line)	1 Sunday
Overtime notes	3 (1 earned comp leave)
Comp leave credits granted · used · expired	2 · 1 · 1
Expenses approved, not yet paid	₹1,840 (5 claims)

There is no free monthly leave allowance and **no salary stored in MaxOff**: Prishit works out pay (for example, a fixed salary minus the additional leave, plus approved expenses) from these figures. Prakyat never sees this summary, though his own month is in it like everyone's. Freelancers are left out.

17 Expense claims READY NOW

Claiming (Xyz or Prakyat)

- 1 At **End day** : "Any expenses to claim today?" → **Yes** → **End day, add expenses**. (Or later: **Attendance & leave** → **Expenses** → **Add expense** .)
- 2 Enter the **amount (₹)**, a **category** (Travel, Food, Materials, Other; Prishit edits the list in **Settings** → **Expenses**), what it was for and the date. **Add another** for several.
- 3 Attach a **receipt photo**: optional, but required above ₹500 (Prishit sets the amount in **Settings** → **Expenses**).
- 4 Submit. It can be withdrawn until Prishit decides.

Claims are accepted for expenses dated in the current month, or in the previous month during the first 5 days of the new one.

Deciding (Prishit)

Approvals → **Expenses** → **Review** (the receipt is in the sheet) → **Approve**, or **Reject...** with a reason Xyz sees. When he pays it with the salary: **People** → **Xyz** → **Month** → **Mark paid** (one claim, or **Mark all paid**, with the date). The team report shows what's approved and not yet paid.

Who sees claims: the person sees their own; Prishit sees everyone's; Prakyat never sees anyone else's, not even his team's.

18 Settings MOSTLY READY

[More → Settings](#) . Everything configurable lives here, changeable by Prishit without a developer. Prakyat sees only lists, templates and custom fields for his own clients.

- **Company:** name and logo, weekly off days (Sunday), holidays, reminder times, how late a forgotten End day can still be recorded (5:00 AM), acknowledgement and overdue escalation times, workload warning level, email cap.
- **Team:** add a person (an Employee by invite, or a Freelancer with a coordinator), role, job title, deactivate and reactivate. Job titles are an editable list (Video Editor, Graphic Designer, ...).
- **Lists:** expense categories ([Settings → Expenses](#) , with the receipt amount), task types ([Settings → Task types](#) , Prishit only: the kinds of task, their order and what each asks for), project steps (for example Script → Shoot → Edit → Posted; phase 7). A list still to come shows "Coming soon".
- **Custom fields** for clients, contacts, projects, pieces and tasks: for all clients (Prishit only) or for one client (Prakyat for his own). Every client is different, so this is where the app bends to each one. Admins can read client and contact fields, so the form reminds: *"Amounts belong in project billing (Owner only)."*
- **Templates:** task templates ([Settings → Templates](#) : a type, a priority, stages and field defaults, shared by everyone; Prakyat edits his own, Prishit any). Project templates come in phase 7.
- **Storage:** how much file space MaxOff is using (phase 8).

19 Rules that always hold

1. Exactly three roles: Owner (Prishit), Admin, Crew. Job titles are just labels.
2. **Only Prishit** decides attendance and leave, and gives every final approval.
3. **Money is Prishit's only:** prices, revenue and reports. The one exception: people see their own expense claims.
4. Money counts as earned only when Prishit approves the client's piece of work.
5. Client work and crew tasks are separate. Crew see only their tasks and a client's name on them.
6. Everyone on a task taps "Task Noted"; only its primary owner taps Mark done.
7. **Nothing is ever deleted or overwritten.** Corrections sit next to the original, with who, when and why. Records are closed or archived, not destroyed.
8. All dates and times are Indian time (IST).
9. MaxOff collects facts; it never rates people.

20 How the app behaves on a phone READY NOW

- **It behaves like a real app, not a website.** The back gesture closes the top thing first (a list, a dialog, a sheet), then goes back one screen. Switching tabs or months never piles up "back" steps. Back on the home tab closes the app.
- Screens you open slide in; the < at the top slides them out.

- Each tab remembers where you scrolled.
- When you come back to the app, it quietly refreshes the data. The bell and Alerts update while you watch, with no reload (section 14).
- Tapping a notification opens its screen with the list underneath, so back goes to the list and not out of the app.
- No pinch-zoom on Android; the app follows the phone's own text size instead.
- **First glance, then depth:** each tab's first screen shows what needs you now; details are one tap deeper, never more than two.

21 Not in the first version

Coming after version 1.2, in this order

Version 1.2 added phase 4 (crew tasks, with freelancers) and the first part of phase 5 (phone notifications, the bell and Alerts, the few emails, quiet hours).

1. **Phase 5, next part:** task reminders and escalations, Prishit's morning digest, who isn't reachable.
2. **Phase 6:** My Day, Prishit's Today, Prakhyat's dashboard, the calendar and the end-of-day report.
3. **Phase 8:** handing in work (files and links).
4. **Phase 7:** client projects and the monthly round.
5. **Phase 9:** money, reports and closing the month.
6. **Phase 10:** polish, the security review and the full launch.

Each goes live as soon as it is reviewed; there are no fixed dates. Crew-facing phases (4, 5, 6, 8) come before the management ones (7, 9).

Right after the full launch (decided 27 Sep 2026)

- The automatic **Google Drive archive** of all submitted work, with checks that pasted links are shared and cleanup of MaxOff's own copies.
- Searching the full **activity history** (everything is still recorded from day one).
- **Exports** (Markdown for AI analysis, CSV, PDF).
- **Global search** (Ctrl/Cmd + K).

Out of scope for now

Freelancer payments · salary records and payroll · GST invoicing · client login or portal · WhatsApp · a native store app · timesheets · general leave balances (only comp leave credits) · AI features inside MaxOff · leads pipeline · accounting integration · custom roles.

Prepared from MaxOff's product decisions (PRODUCT.md, ROADMAP.md and the decision records) as of 1 October 2026, for version 1.2.
